01

A PROBLEM WORTH SOLVING

THREE FAILURES HAPPENING SIMULTANEOSLY IN EVERY MALAYSIAN HOME

THE ASSET

RM3K

Food wasted per household yearly

THE PROBLEM

0%

Of existing apps track expiry financially

THE GAP

MANUAL

entry kills all existing apps

*Recipe apps require users to type every ingredient which causes too much effort for users to adopt

OUR SOLUTION

Cook.GPT i s an economic decision engine,
not a recipe search tool

1. Snap Fridge Photo
2. Z.AI Vision detects ingredients
3. Economic Logic Layer assigns Risk Value
4. Rescue Recipe + RM saved returned

OUR SOLUTION

Cook.GPT i s an economic decision engine, not a recipe search tool

1 IDENTIFY

Multi-object detection of Malaysian-specific ingredients such as Cili Padi, Kangkung with zero manual entry.

3 QUANTIFY

Cross-references detected items against local market prices to calculate "Total Savable RM" in your fridge right now.

2 RESCUE

Generates Smart Substitution recipes that prioritize the highest-risk (expiring soonest) ingredients first.

4 GAMIFY

Cumulative "RM Saved" + “Waste Avoided (kg)" dashboard turns responsible cooking into a Level Up experience.

QUALITY ASSURANCE & RISK MITIGATION

COLUMN 1: RISK ANTICIPATION & SAFEGUARDS

Inference Hallucination: Strict prompt engineering forbids non-food inclusions, returning an "Invalid Item Detected" message if inedible items are scanned.

RM Valuation Errors: Implemented hard maximum values for categories (e.g., "Leafy Green" cannot exceed RM 10) to prevent absurd calculations.

COLUMN 2: TESTING COVERAGE & CI/CD STRATEGY

Network & UX Resiliency: Tested API latency against 3G throttling, masking wait times with a cinematic 10-second variable loading UI.

06

IMPACT AND FEASIBILITY

TARGET USERS

Home cooks

mid-range smartphones, Malaysian market

FUTURE PARTNERS

Jaya Grocer

"One-click buy" missing Ingredient integration

SESSION COST

RM0.05

avg token cost per user session

WHAT WE BUILT

Visual pantry audit - **zero manual entry**

Economic impact logic - **real RM saved**

Inference recipe engine — **culturally authentic**

Smart substitution U I - **expiry-first priority**

Impact dashboard - **gamified, trackable**

The fridge already has the answer, Cook.GPT just reads it
